

HACK THE BOX SHERLOCK - DFIR

LOGJAMMER

Scenario

You have been presented with the opportunity to work as a junior DFIR consultant for a big consultancy. However, they have provided a technical assessment for you to complete. The consultancy Forela-Security would like to gauge your knowledge of Windows Event Log Analysis. Please analyse and report back on the questions they have asked.

Upon unzipping the zip file given by the question we get 5 Windows Event Log files which I will turn to CSV file format using EvtxECmd.exe CLI utility.

1. When did the cyberjunkie user first successfully log into his computer? (UTC)

The screenshot shows the Timeline Explorer v2.1.0 interface. The top bar includes 'File', 'Tools', 'Tabs', 'View', and 'Help'. Below the bar, there are tabs for 'defender.csv', 'firewall.csv', 'powershell.csv', 'security.csv', and 'system.csv'. The main area displays a timeline of events for the 'cyberjunkie' user. The events are as follows:

Map Description	User Name	Remote Host	Payload Data
Event log cleared	DESKTOP-887GK2L\CyberJunkie		SID: (S-1-5-21-
A logon was attempted using explicit credentials	WORKGROUP\DESKTOP-887GK2L\$	127.0.0.1:0	Target: DESKTOF
Successful logon	WORKGROUP\DESKTOP-887GK2L\$	DESKTOP-887GK2L (127.0.0.1)	Target: DESKTOF
Successful logon	WORKGROUP\DESKTOP-887GK2L\$	DESKTOP-887GK2L (127.0.0.1)	Target: DESKTOF
A logon was attempted using explicit credentials	WORKGROUP\DESKTOP-887GK2L\$	127.0.0.1:0	Target: DESKTOF
Successful logon	WORKGROUP\DESKTOP-887GK2L\$	DESKTOP-887GK2L (127.0.0.1)	Target: DESKTOF
Successful logon	WORKGROUP\DESKTOP-887GK2L\$	DESKTOP-887GK2L (127.0.0.1)	Target: DESKTOF
Scheduled Task created	DESKTOP-887GK2L\CyberJunkie		TaskName: \HTB-

Tag	Record Number	Event Record Id	Time Created	Event Id	Level	Provider	Channel	Process Id
1	1	13020	2023-03-27 14:36:45	1102	Info	Microsoft-Windows-Eventlog	Security	1
38	38	13057	2023-03-27 14:37:09	4648	LogAlways	Microsoft-Windows-Security-Auditing	Security	
39	39	13058	2023-03-27 14:37:09	4624	LogAlways	Microsoft-Windows-Security-Auditing	Security	
40	40	13059	2023-03-27 14:37:09	4624	LogAlways	Microsoft-Windows-Security-Auditing	Security	
68	68	13087	2023-03-27 14:38:32	4648	LogAlways	Microsoft-Windows-Security-Auditing	Security	
69	69	13088	2023-03-27 14:38:32	4624	LogAlways	Microsoft-Windows-Security-Auditing	Security	
70	70	13089	2023-03-27 14:38:32	4624	LogAlways	Microsoft-Windows-Security-Auditing	Security	
84	84	13103	2023-03-27 14:51:21	4698	LogAlways	Microsoft-Windows-Security-Auditing	Security	

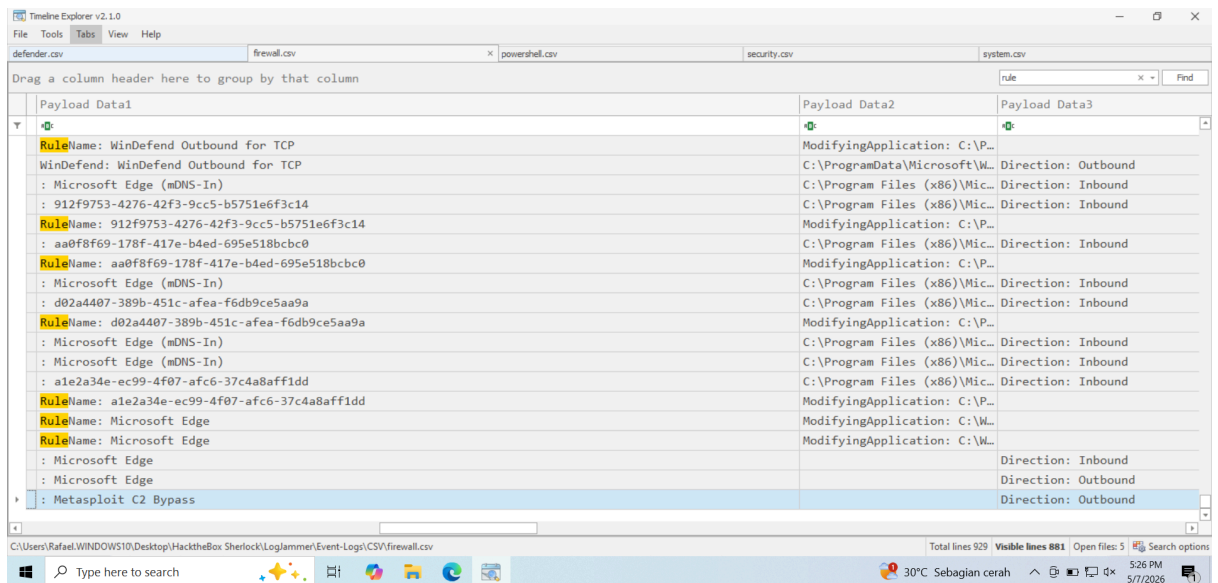

For this first question I will be looking at the security.csv first and I filtered using the keyword "cyberjunkie". However, this question is a bit tricky since the format it is asking is YYYY/MM/DD HH:MM:SS, whereas the usual format is DD/MM/YYYY HH:MM:SS. So there we can see in the screenshots above the answer, and changing the format we get **27/03/2023 14:37:09**.

- The user tampered with firewall settings on the system. Analyze the firewall event logs to find out the Name of the firewall rule added?

Map Description	User Name	Remote Host	Payload Data1
A rule has been deleted in the Windows Defender Firewall exception list			RuleName: WinDefend Outbound for TCP
A rule has been added to the Windows Defender Firewall exception list		*: *	WinDefend: WinDefend Outbound for TCP
A rule has been added to the Windows Defender Firewall exception list		*: *	: Microsoft Edge (mDNS-In)
A rule has been modified in the Windows Defender Firewall exception list		*: *	: 912f9753-4276-42f3-9cc5-b5751e6f3c14
A rule has been deleted in the Windows Defender Firewall exception list			RuleName: 912f9753-4276-42f3-9cc5-b5751e6f3c14
A rule has been modified in the Windows Defender Firewall exception list		*: *	: aa0f8f69-178f-417e-b4ed-695e518bcb0

A rule has been added to the Windows Defender Firewall exception list		*: *	: Microsoft Edge (mDNS-In)
A rule has been added to the Windows Defender Firewall exception list		*: *	: Microsoft Edge (mDNS-In)
A rule has been modified in the Windows Defender Firewall exception list		*: *	: a1e2a34e-ec99-4f07-afc6-37c4a8aff1dd
A rule has been deleted in the Windows Defender Firewall exception list			RuleName: a1e2a34e-ec99-4f07-afc6-37c4a8aff1dd
A rule has been deleted in the Windows Defender Firewall exception list			RuleName: Microsoft Edge
A rule has been deleted in the Windows Defender Firewall exception list			RuleName: Microsoft Edge
A rule has been added to the Windows Defender Firewall exception list		*: *	: Microsoft Edge
A rule has been added to the Windows Defender Firewall exception list		*: *	: Microsoft Edge
A rule has been added to the Windows Defender Firewall exception list		*: 4444	Metasploit C2 Bypass

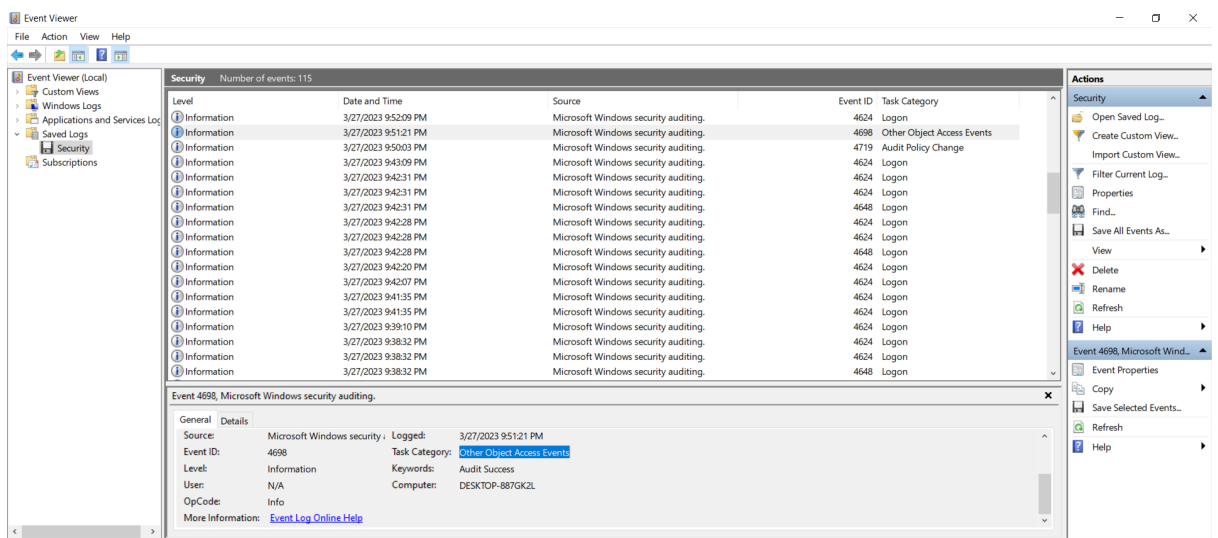

I filtered for the keyword "rule" in the firewall.csv like instructed in this specific question. And then I scrolled down to find something suspicious that could be the answer to this question, and at last I found something whose name is already suspicious which is **Metasploit C2 Bypass**, and it stated then in the row that the rule has been added to the Windows Defender Firewall exception list by using port 4444 which is the default port for Metasploit.

3. Whats the direction of the firewall rule?

In the same row as the previous question's answer, there is the direction of the firewall rule which is **Outbound**, which means traffic coming in from inside the network to outside the network.

4. The user changed audit policy of the computer. Whats the Subcategory of this changed policy?

For this I changed to Event Viewer to open the EVTX file directly. Here we can see in the row above or next to the Audit Policy Change there is the row stating Audit Success. It has a Task Category (Sub Category) which is

Other Object Access Events, which tracks activities related to COM+ objects and Scheduled Tasks (creation, deletion, updates).

5. The user "cyberjunkie" created a scheduled task. Whats the name of this task?

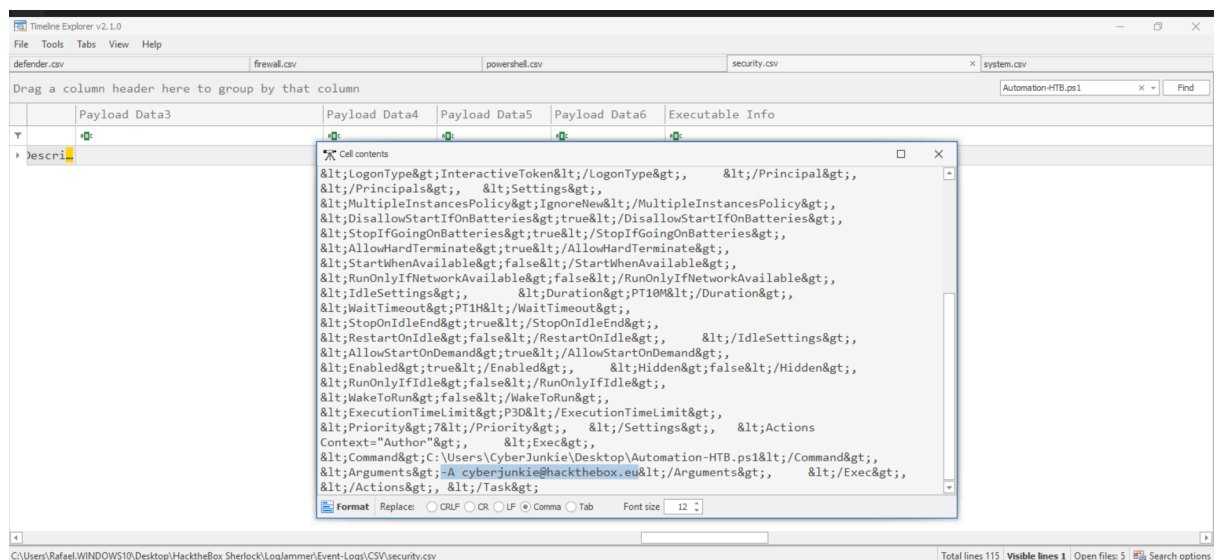

[illegible]

Back to the Timeline Explorer I searched in the security.csv. I filtered for the word scheduled and there was an entry's Description where it says that a Scheduled Task was created and the task's name is **HTB-AUTOMATION**.

6. Whats the full path of the file which was scheduled for the task?

I searched "HTB-", getting inspiration from the previous question's answer which "HTB-AUTOMATION", and then I found a path to Automation-HTB.ps1 under the user of CyberJunkie and I copied the whole path including the extension of the file, so the answer is **C:\Users\CyberJunkie\Desktop\Automation-HTB.ps1**.

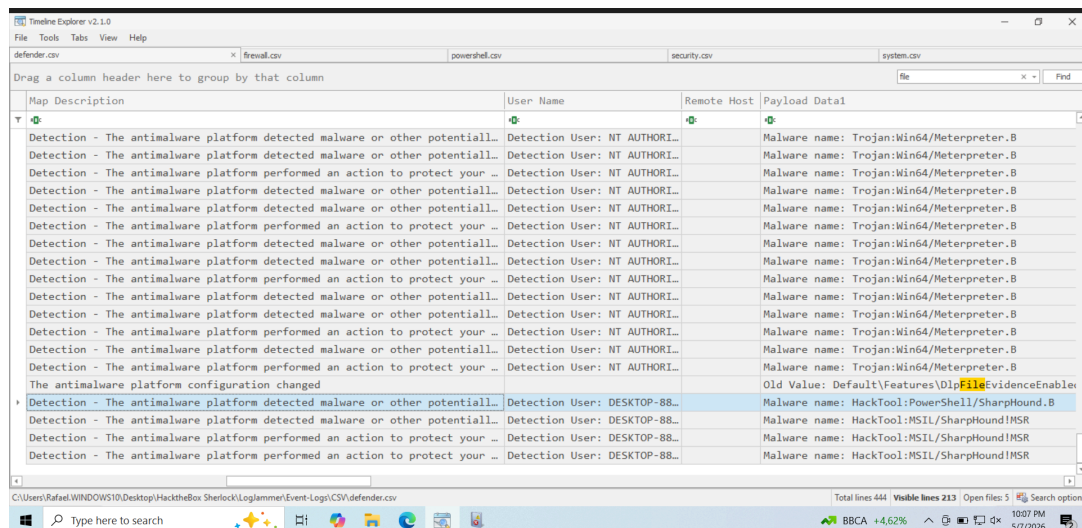

7. What are the arguments of the command?

I searched up "Automation-HTB.ps1" which is the answer to the previous question and it led me to the same entry and cell contents, however I found the command's argument right below the path which is **-A cyberjunkie@hackthebox.eu**

8. The antivirus running on the system identified a threat and performed actions on it. Which tool was identified as malware by antivirus?

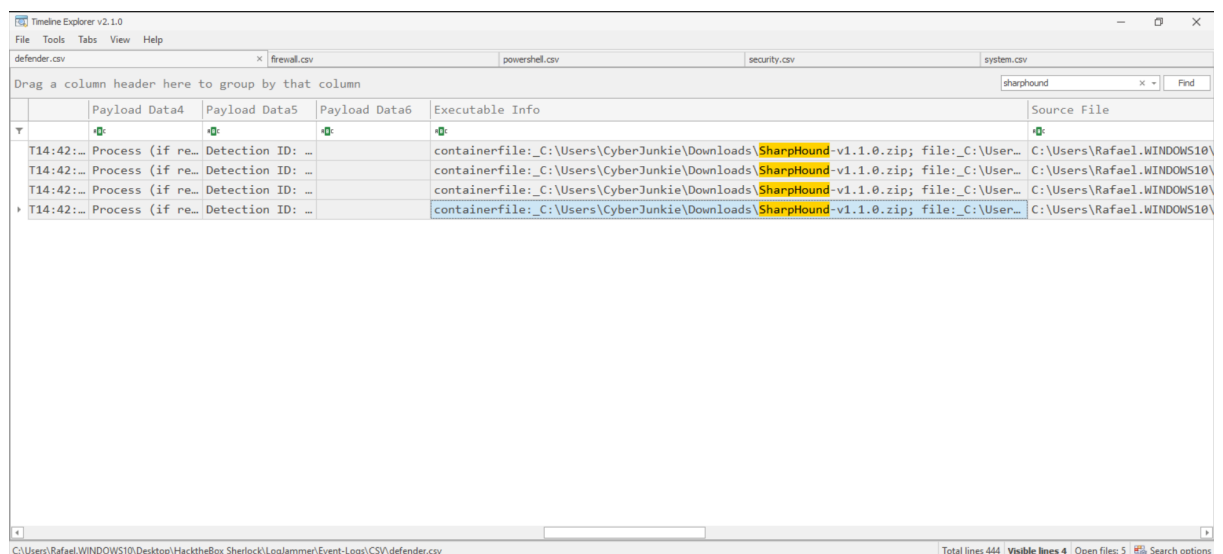

Rafael Angelo Christianto

Map Description	User Name	Remote Host	Payload Data1
Detection - The antimalware platform detected malware or other potential...	Detection User: NT AUTHORI...		Malware name: Trojan:Win64/Meterpreter.B
Detection - The antimalware platform detected malware or other potential...	Detection User: NT AUTHORI...		Malware name: Trojan:Win64/Meterpreter.B

Detection - The antimalware platform performed an action to protect your ...	Detection User: NT AUTHORI...		Malware name: Trojan:Win64/Meterpreter.B
The antimalware platform configuration changed			Old Value: Default\Features\DlpFileEvidenceEnable...
Detection - The antimalware platform detected malware or other potential...	Detection User: DESKTOP-88...		Malware name: HackTool:PowerShell/SharpHound.B
Detection - The antimalware platform detected malware or other potential...	Detection User: DESKTOP-88...		Malware name: HackTool:MSIL/SharpHound\MSR
Detection - The antimalware platform performed an action to protect your ...	Detection User: DESKTOP-88...		Malware name: HackTool:MSIL/SharpHound\MSR
Detection - The antimalware platform performed an action to protect your ...	Detection User: DESKTOP-88...		Malware name: HackTool:MSIL/SharpHound\MSR

I found that the malware found was under the defender.csv since it is dealing with antivirus and malware. And then in the row it says antimalware platform detection. And the malware name is **SharpHound**.

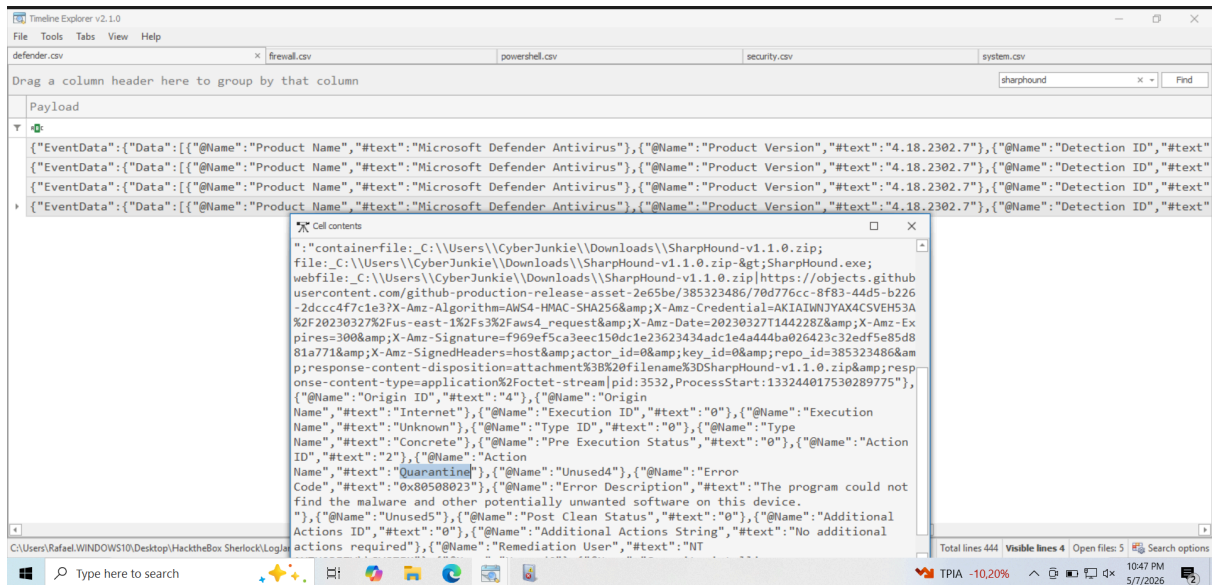

9. Whats the full path of the malware which raised the alert?

Payload Data4	Payload Data5	Payload Data6	Executable Info	Source File
T14:42:...	Process (if re...	Detection ID: ...	containerfile: C:\Users\CyberJunkie\Downloads\SharpHound-v1.1.0.zip; file: C:\User...	C:\Users\Rafael.WINDOWS10\...
T14:42:...	Process (if re...	Detection ID: ...	containerfile: C:\Users\CyberJunkie\Downloads\SharpHound-v1.1.0.zip; file: C:\User...	C:\Users\Rafael.WINDOWS10\...
T14:42:...	Process (if re...	Detection ID: ...	containerfile: C:\Users\CyberJunkie\Downloads\SharpHound-v1.1.0.zip; file: C:\User...	C:\Users\Rafael.WINDOWS10\...
T14:42:...	Process (if re...	Detection ID: ...	containerfile: C:\Users\CyberJunkie\Downloads\SharpHound-v1.1.0.zip; file: C:\User...	C:\Users\Rafael.WINDOWS10\...

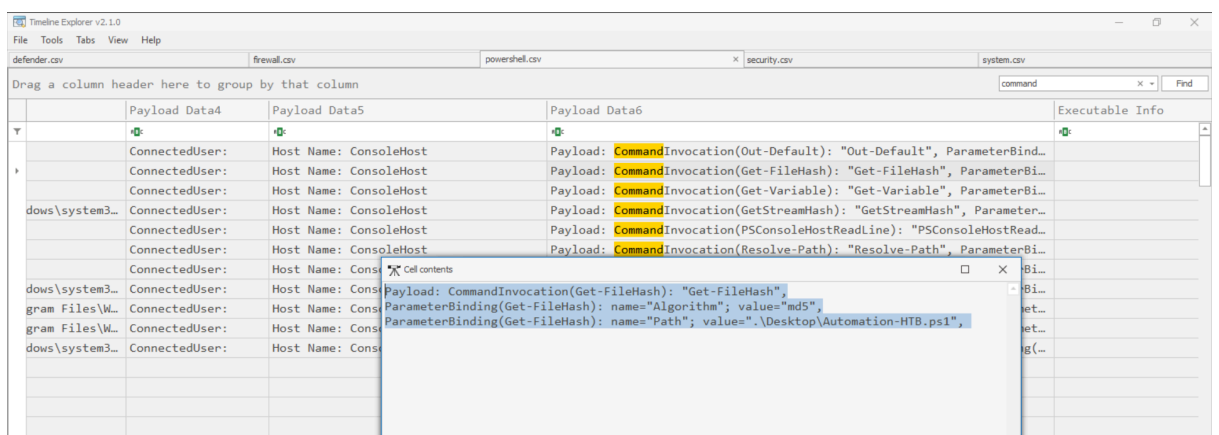

I filtered the word "SharpHound" also in the defender.csv which is the name of the malware, and I found a zip file under the Downloads folder of CyberJunkie therefore that has to be the answer which is **C:\Users\CyberJunkie\Downloads\SharpHound-v1.1.0.zip**.

10.What action was taken by the antivirus?

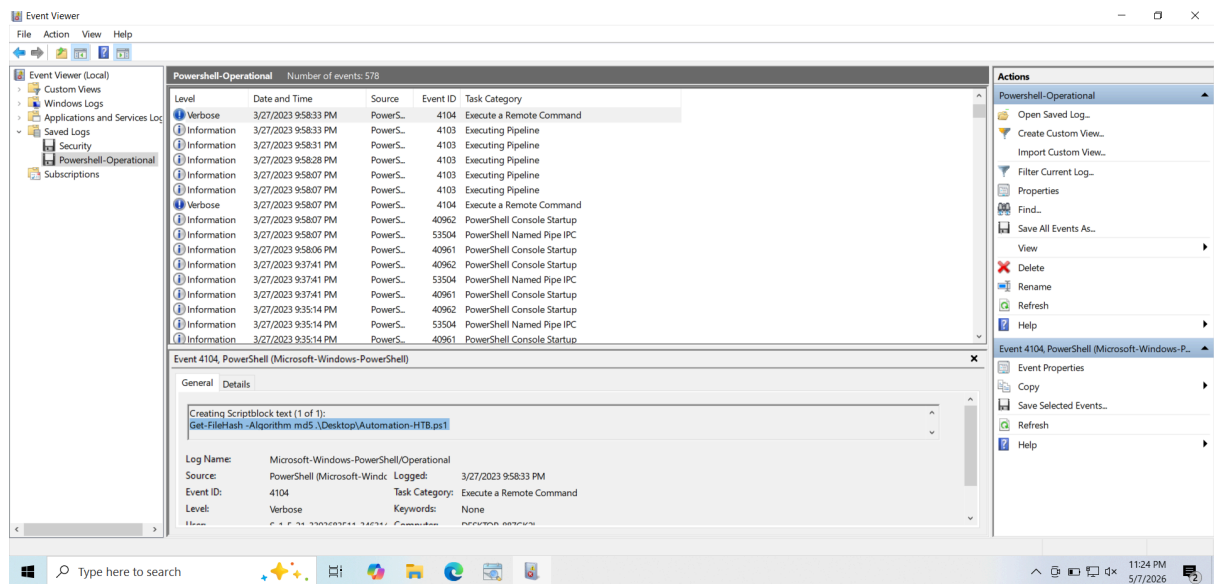

Also still under the same row as the previous question's answer but when I looked at the cell contents for the payload column, I see there is a parameter name Action Taken, and highlighted in the screenshot above is the action taken by the antivirus to Sharphound and it is to **Quarantine** and stop the malware to disrupt more services and infect other devices.

11. The user used Powershell to execute commands. What command was executed by the user?

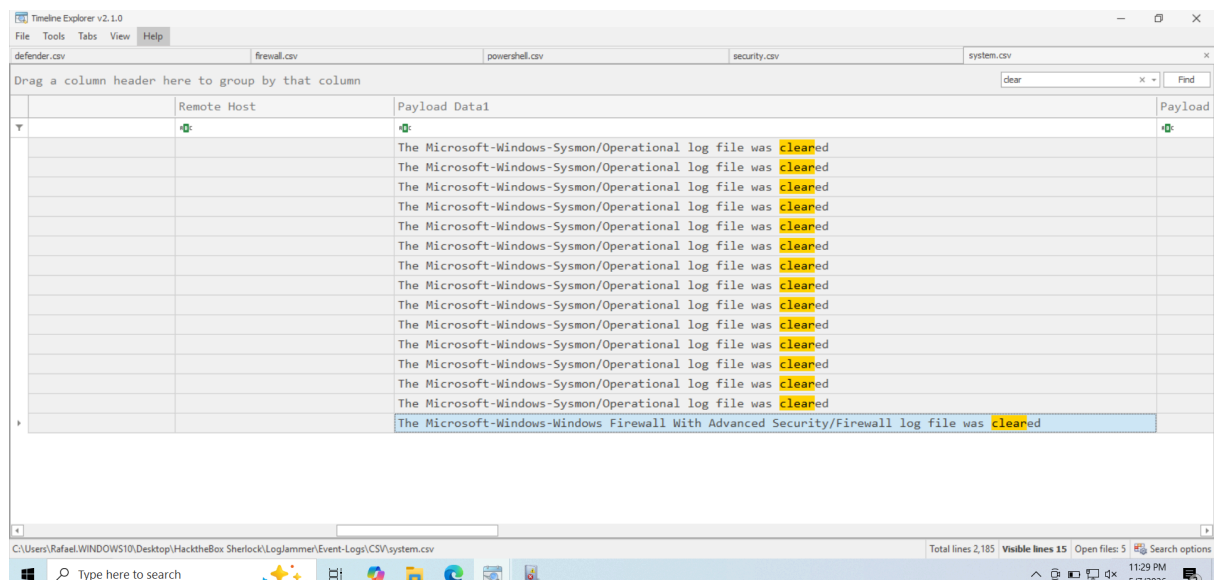

I saw this command on Timeline Explorer that involved Automation-HTB.ps1 which is the scheduled task file mentioned in previous questions. I looked more into it using Event Viewer.

Then, in the screenshot above the Task Category is executing a remote control and then it is the same file and command discussed as seen previously in Timeline Explorer therefore the answer is **Get-FileHash -Algorithm md5 .\Desktop\Automation-HTB.ps1**

12. We suspect the user deleted some event logs. Which Event log file was cleared?

Here I found the answer by filtering out the word "clear" in the system.csv file that the log that was cleared is the **Microsoft-Windows-Windows Firewall With Advanced Security/Firewall**, which can possibly be an action to cover up the tracks of the cyber attack or malware prevention.

You have solved LogJammer!

Congratulations  **rafaelangelo** best of luck in capturing flags ahead!
